

Engine gasket sets and spare parts suitable for BMW i3 Range Extender

In some markets, BMW offered a range extender powered by gasoline with 25 kW of power as an optional extra to the 125 kW electric engine in the i3.

The generator connected to the engine can feed in a maximum electrical output of 26.6 kW at 5000 rpm. The additional energy from the 9-liter fuel tank extends the range by up to 150 km. It can be started as soon as the battery charge level falls below 75 % or starts automatically as soon as it falls below the threshold value of 7 %.

The engine is only used to maintain the charge level of the battery and only charges it up to the charge level when activated. Whether the engine is operated at all or the speed of the engine depends on the charge level of the battery and the driving speed. The same engine has also been installed in a more powerful version in the C 650 GT and C 600 Sport scooters since 2012. In addition to spare parts for e-mobility in the i3, Elring also offers an extensive product range for the water-cooled two-cylinder in-line engine.
