Mini N14

Cooper S, John Cooper Works

Elring offers the most comprehensive range of gaskets, gasket sets and radial shaft seals for the N14 B 16 A/AB/C MINI engines. Elring product managers have paid particular attention to ensuring that the gasket sets are complete. As can be seen in the illustration, the Elring # 376.320 cylinder-head gasket set also contains the exhaust manifold gasket. In this case, it is combined with a thermal shielding system #718.012. The material used is the high-quality ElroTherm™ from ElringKlinger.

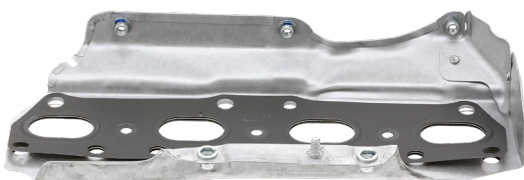

The cylinder-head gasket included has an installed thickness of 0.9mm. Elring also offers a repair stage with an installed thickness of 1.2mm under #295.750.

Gasket set for cylinder-head 376.320

Reusing the exhaust manifold gasket is not possible. The high temperature resistant micro sealing coating applied to the stamped seam is transferred to the sealing surface on the cylinder-head when installing the gasket.

Before installation, make sure that the surface is clean and free of residues. It is also advisable to use a straight edge to check the evenness of the surfaces. To guarantee the full function, it is important to adhere to the specified torque of 25Nm and to tighten the screw fittings from inside to outside.
